

CIAM4072 Undergraduate Seminar Evaluation

Name: ANDREA ZAPATA

Date: 2/21/2017

1. What was the main topic of today's seminar?

Understand the importance of clouds and their role in the energy balance of the earth in order to explain the cloud regime changes between California and Hawaii.

2. What issue/s was the researcher trying to address?

The speaker is trying to address the study of marine clouds and their properties, precipitation, aerosols, radiation, and atmospheric structure as indicators of climate variations across the Eastern North Pacific in order to create a model for cloud formation and its patterns.

3. What have you learned from the presentation?

It's important to be out on the field to get a more true perception of how things work and have a better understanding of statistics and models.

4. Your thoughts on today's seminar

Since it was something I had never heard about it was a bit confusing the use of the equipments. But overall, once I understood the importance of such studies it appeared very interesting to me.
